

PORTABLE GPS Satellite Tracker + Messenger

Rugged, Pocket-Sized GPS Satellite Tracker

Add this compact pocket-sized product to your travel gear and stay connected even when you are out of cellular range.

Let family and friends know that you are alright. In case of emergency send emergency contacts an SOS message with GPS co-ordinates showing your exact location.

Tracking options: motion activated tracking for basic tracking or extreme tracking with a track rate of every 2.5 minutes.

Minimum requirement is an annual GEOS registration. Additional services can be enabled such as SMS credits for messages, 'Search & Rescue' and MEDEVAC for search, rescue and evacuation by helicopter.

Send a GEOS International Emergency SOS. This will activate an emergency alarm in a 24/7 worldwide emergency center in the US who will take appropriate steps of emergency escalation for your location (this step is for absolute emergencies only as it can be very costly).
